Vistawall Merit system offers a complete range of window and door systems and is ideal for residential developments with larger window and door sizes.

The Merit System offers an economical solution for apartments and housing developments.

Either non-thermal aluminium profiles or thermal profiles using polyamide thermal break system are available.

It is available in a range of different framework types including inward and outward opening windows and doors as well as sliding and louvered systems.

Merit sliding windows have continuous pile seals containing a polypropylene fin to provide good weatherproofing. They can also be fitted with Q-Lon seals for improved performance. Two, three or four panel windows can be supplied in any configuration of sliding and fixed panels.

All doors are rebated at the head and stiles and have gasket seals to provide an airtight perimeter seal. Standard one point locking is normally used. For improved performance and security three point locking and sealed rebated thresholds can be provided. The system is designed to use Vistawall standard hardware.

Fixed windows can either be integrated with the doors and sliding windows or used as individual units.

A range of mullion profiles are available to support higher spans if required.

All visible aluminium is finished in either painted or anodized finish to meet international standards.

The system is designed to accommodate various glass thicknesses.

All gaskets and setting blocks are made from extruded EPDM in a hardness to suit the application. Fasteners are 300 series stainless steel.
